

### Study logistics

1. Through this study, we want to learn how non experts would teach a robot in order to build interaction mechanisms in the robot.
2. This is an interview study will happen over Zoom. Please ensure that you have downloaded [Zoom](#) to your computer, since the web version might make it harder to efficiently perform the study.
3. You will be asked to control the interviewer's computer remotely to interact with this environment. You will be given 5 minutes to explore the environment.
4. We will be recording the video/audio of this interaction. Please read the consent form (attached in this email) and ask any questions that you have. Once you have read and provide your consent, we will begin recording and start the study.
